

WatchGuard Security Services

WatchGuard offers the most comprehensive portfolio of network security services, from traditional IPS, GAV, application control, spam blocking, and web filtering to more advanced services for protecting against advanced malware, ransomware, and the loss of sensitive data. WatchGuard also offers a full suite of network visibility and management services.

FUNDAMENTAL SECURITY SERVICES

INTRUSION PREVENTION SERVICE (IPS)

IPS uses continually updated signatures to scan traffic on all major protocols to provide real-time protection against network threats, including spyware, SQL injections, cross-site scripting, and buffer overflows.

REPUTATION ENABLED DEFENSE SERVICE (RED)

A powerful, cloud-based reputation lookup service that protects web users from malicious sites and botnets, while dramatically improving web processing overhead.

NETWORK DISCOVERY

A subscription-based service for Firebox appliances that generates a visual map of all nodes on your network so you can easily see where you may be at risk.

WEBBLOCKER URL FILTERING

In addition to automatically blocking known malicious sites, WebBlocker's granular content and URL filtering tools enable you to block inappropriate content, conserve network bandwidth, and increase employee productivity.

APPLICATION CONTROL

Selectively allow, block, or restrict access to applications based on a user's department, job function, and time of day and to then see, in real-time, what's being accessed on your network and by whom.

GATEWAY ANTIVIRUS (GAV)

Leverage our continuously updated signatures to identify and block known spyware, viruses, trojans, worms, rogeware and blended threats – including new variants of known viruses. At the same time, heuristic analysis tracks down suspicious data constructions and actions to make sure unknown viruses don't slip by.

SPAMBLOCKER

Real-time spam detection for protection from outbreaks. Our spamBlocker is so fast and effective, it can review up to 4 billion messages per day.

ADVANCED SECURITY SERVICES

APT BLOCKER – ADVANCED MALWARE PROTECTION

APT Blocker uses an award-winning next-gen sandbox to detect and stop the most sophisticated attacks including ransomware, zero day threats and other advanced malware.

DATA LOSS PREVENTION (DLP)

This service prevents accidental or malicious data loss by scanning text and common file types to detect sensitive information attempting to leave the network.

DIMENSION COMMAND

Dimension translates data collected from all appliances across your network into actionable network and threat intelligence. Dimension Command gives you the power to take action to mitigate those threats instantly, from one central console.

THREAT DETECTION AND RESPONSE

Correlate network and endpoint security events with enterprise-grade threat intelligence to detect, prioritize and enable immediate action to stop malware attacks. Improve visibility by evolving your existing security model to extend past prevention, to now include correlation, detection and response.
